NAME

pacman_install - installs official Arch Linux packages from a text file

SYNOPSIS

pacman_install [OPTIONS] FILE

DESCRIPTION

The **pacman_install(1)** command reads in a list of official Arch Linux packages from a text *FILE* and installs them. Note that packages that has the text AUR in the same line will be ignored.

OPTIONS

–f

By default, if the listed packages are already installed, the program skips the installation. You can force install all listed packages by using this option.

-c

Cleans the system by removing orphan packages and packages that are no longer installed from the cache as well as currently unsed sync databases.

-d

Deep cleans the system by removing orphan packages and all files from the cache.

EXAMPLES

packages correspond to FILE containing a list of packages for example.

In the case below, only geany and firefox will be installed. rstudio-server-bin and google-chrome will be ignored.

```
# ide
rstudio-server-bin,AUR
geany
# browser
firefox
google-chrome,AUR
```

Default

Install only packages that are not yet installed in the system.

```
pacman_install packages
```

Force

Install all packages in the system.

```
pacman_install -f packages
```

Clean

Clean orphan packages and package cache.

```
pacman_install -c packages
```

Deep clean

Clean orphan packages and empty package cache.

```
pacman_install -d packages
```

EXIT STATUS

0

Sucess.

1

Failure.
