## NAME
aur_install − installs AUR packages from a text file

## SYNOPSIS
**aur_install** [*OPTIONS*] *FILE*

## DESCRIPTION
The **aur_install(1)** command reads in a list of packages from a text *FILE* selects AUR packages (has the text AUR in the same line) and installs them.

## OPTIONS
**−f**

By default, if the listed packages are already installed, the program skips the installation. You can force install all listed packages by using this option.

**−c**

Cleans the system by removing orphan packages and packages that are no longer installed from the cache as well as currently unused sync databases.

**−d**

Deep cleans the system by removing orphan packages and all files from the cache.

## EXAMPLES
packages correspond to a *FILE* containing a list of packages for example. In the case below, only rstudio-server-bin and google-chrome will be installed. geany and firefox will be ignored.
