NAME

pacman_install − installs official Arch Linux packages from a text file

SYNOPSIS

pacman_install [*OPTIONS*] *FILE*

DESCRIPTION

The **pacman_install(1)** command reads in a list of official Arch Linux packages from a text *FILE* and installs them. Note that packages that has the text AUR in the same line will be ignored.

OPTIONS

−f

By default, if the listed packages are already installed, the program skips the installation. You can force install all listed packages by using this option.

−c

Cleans the system by removing orphan packages and packages that are no longer installed from the cache as well as currently unsed sync databases.

−d

Deep cleans the system by removing orphan packages and all files from the cache.

EXAMPLES

packages correspond to *FILE* containing a list of packages for example.

In the case below, only geany and firefox will be installed. rstudio-server-bin and google-chrome will be ignored.

```
# ide
rstudio−server−bin,AUR
geany
# browser
firefox
google−chrome,AUR
```

Default

Install only packages that are not yet installed in the system.

pacman_install packages

Force

Install all packages in the system.

pacman_install −f packages

Clean

Clean orphan packages and package cache.

pacman_install −c packages

Deep clean

Clean orphan packages and empty package cache.

pacman_install −d packages

EXIT STATUS

0

Sucess.

1

Failure.
